

Sharma Traders - Operating Policy

Version 3, effective 1 April 2026. Owner: Vinod Sharma.

1. Stock and reordering

- 1.1 Safety stock is 3 days of average daily sales (based on the last 90 days).
- 1.2 Reorder point = average daily sales x supplier lead time + safety stock.
- 1.3 When stock on hand plus stock already on order is at or below the reorder point, raise a reorder.
- 1.4 Reorder quantity = enough to cover supplier lead time + 30 days of sales, minus stock on hand and on order, rounded UP to the supplier's pack size.
- 1.5 Any single purchase order above Rs 1,00,000 needs the owner's approval (Mr. Vinod Sharma). Below that, the store manager may approve. In OpsPilot every PO still needs one human approval.

2. Customer credit

- 2.1 Each customer has a credit limit and credit days (see customer list).
- 2.2 A bill is overdue when it is unpaid after its credit days.
- 2.3 Send a polite payment reminder when any bill is 7 or more days overdue.
- 2.4 Put new orders ON HOLD (needs owner approval to dispatch) when a customer has a bill more than 30 days overdue, or total outstanding is above the credit limit.
- 2.5 Reminders must be polite and in simple Hinglish or English. Never threaten. Never share another customer's details.

3. Orders

- 3.1 An order that is more than 5x the customer's average order quantity for that item must be confirmed by the owner before dispatch.
- 3.2 If a message is unclear (for example it refers to a photo), ask the customer - do not guess.
- 3.3 Items we do not stock should be logged as enquiries, not orders.

4. Supplier invoices

- 4.1 Check every invoice line rate against the last purchase rate. A change of more than 10% must be flagged to the owner before payment.
- 4.2 Never pay the same invoice number from the same supplier twice.
